

# SHORT ROOF-LINE CONNECTIVE ADAPTATION FOR A CARGO CARRIER

## Abstract

A vehicular cargo carrying arrangement having a cargo carrier secured by an anchor assembly to a transporting vehicle. The arrangement includes a transporting vehicle and a cargo carrier releasably interconnected by an anchor assembly, the transporting vehicle having a receiving arrangement for the anchor assembly. The anchor assembly has a pair of spaced apart connecting members, each of the connecting members being releasably attached between the cargo carrier and the transporting vehicle. At least one of the connecting members is adapted to accommodate fixation of a spanning member between the pair of spaced apart connecting members. A spanning member is connected between the pair of spaced apart connecting members and is configured to accept a securement member thereupon by a slip connection.
